

CleanCast

-Overview. CleanCast is a **high-precision** castable material that is designed to produce **fine print details** and **fast printing speeds**. With **20% powder wax content**, CleanCast is a **photopolymer** that ensures a **standard wax burnout cycle** with regular gypsum investment. The addition of **nano-wax** allows for **clean burnout** by dissolving first during the burnout cycle, allowing the resin to burn off without excessive expansion.

CleanCast is the perfect choice for jewelry makers, dental professionals, and engineers who require a high-quality, reliable material that can produce **precise and intricate** designs. With CleanCast, you can create **unique and beautiful** pieces that are sure to impress your clients and customers.

If you have any further questions about CleanCast or would like to learn more about our products, please don't hesitate to contact us. We're always here to help!

MATERIAL PROPERTIES VALUES

Tensile Strength 14.8 MPa

Ignition Temperature 300°C

Density 1.32 g/cm³

Color Green

KEY FEATURES Nano-wax content for superb surface finish Low expansion during burnout
